

# Master's Degree in Analytical Geoeconomics

Mode	<b>On Campus</b>
Duration	<b>1 year</b>
Credits	<b>60 ECTS</b>
€ Fee	<b>14,500€/Course</b>
Campus	<b>Murcia</b>
Language	<b>English</b>
Places	<b>20</b>
Intake	<b>January</b>

## BACKGROUND

In an increasingly complex and interconnected world, governments, international organizations and businesses require professionals capable of understanding and forecasting geopolitical and geoeconomic developments through rigorous analytical methods. The Master in Analytical Geoeconomics responds to this growing demand by combining geopolitical theory, economic analysis and advanced quantitative techniques to train a new generation of specialists in strategic forecasting and data-driven decision-making.

"The Master's in Analytical Geoeconomics equips future analysts and **decision-makers to assess geopolitical risks**, global power dynamics, and economic transformations using **advanced analytical tools**."

## STUDENT PROFILE

The Master in Analytical Geoeconomics is designed for graduates and professionals interested in the intersection of geopolitics, international economics, data science and strategic analysis. The programme welcomes students from diverse academic backgrounds and values interdisciplinary perspectives. While it includes advanced quantitative and computational components, a preparatory module ensures that all participants acquire the necessary foundations in programming, statistics and applied analytical methods before the programme begins.

## OBJECTIVES

The Master in Analytical Geoeconomics aims to provide students with advanced analytical and quantitative skills to understand, model and forecast global geopolitical and geoeconomic dynamics. The programme combines geopolitical theory with computational methods, data analysis and strategic forecasting, preparing graduates to assess geopolitical risks, conduct rigorous research and support evidence-based decision-making in international organizations, governments and the private sector.

## CAREER OPPORTUNITIES

Graduates of the Master in Analytical Geoeconomics will be prepared for analytical, strategic and research-oriented roles across a wide range of international institutions and organizations. Graduates will be able to work in environments that require the interpretation of complex international dynamics through quantitative analysis, strategic forecasting and evidence-based policy and business decision-making. Their interdisciplinary profile will allow them to bridge the gap between geopolitical expertise, economic analysis and advanced computational methods.

## CURRICULUM

Module	ECTS
Preparatory Foundations Module (Mandatory, Non-ECTS)	-
I. Scientific & Quantitative Foundations	12
II. Computational Analytics & Strategic Decision-Making	12
III. International Interactions Track	22
IV. Elective International Track	4
V. Master's Thesis	10
<b>Total</b>	<b>60</b>
